DOOR DAMPERS

Door dampers put an end to slamming doors and make sure they close safely and reliably

- The original from DICTATOR - since 1932
- Highest quality from Dutch production guarantees a long service life and faultless functioning
- Thanks to the vast range of models, it is possible to find the ideal model for nearly every single installation situation

We will gladly provide individual advisory service for your application

Door dampers function

Video

HOW DO DOOR DAMPERS WORK?

Door dampers are usually installed centered on the upper edge of the door. The hook sits above it on the door frame. When the door is opened, the hook automatically pushes the roller lever down, thereby tensioning the integrated spring.

The door damper then pulls the door completely shut and keeps it closed with the force of the spring.

Then, the door damper draws the door completely shut and the force of the spring keeps it closed.

WHAT ARE DOOR DAMPERS USED FOR?

Doors can be loud - especially if they're not closed carefully. This not only happens when they are closed by hand, but also by drafts, gusts of wind or door closers. And the harder the door slams shut, the louder the bang. If doors are cushioned, it will spare the nerves of neighbors, colleagues, and everyone else within earshot.

The door damper not only helps reduce noise pollution and prevents damage to the doors. In many cases, it also contributes to saving energy. This is because it ensures that the doors are really closed, preventing costly warmth or cooled air from getting out.

Moreover, a door damper helps protect the door, hinges, frame and door panel. It works silently and smoothly, safely and reliably. It catches the closing door, cushions the closing motion, pulls it safely into the lock and keeps it reliably closed.

Last but not least, it provides security, through safely and reliably closed entrance doors, e.g. in apartment blocks or office buildings.

ADJUSTMENT OF THE CLOSING SPEED

The speed of door dampers (except Junior & V 1600F) can be easily adjusted to your needs:

- Turning the piston rod clockwise reduces the damping speed
- Turning the piston rod counterclockwise increases the speed; two complete turns are equivalent to a change of approx. 1 second

Application areas for door dampers

[Website](#)

DOOR DAMPERS ON FRONT DOORS AND ENTRANCE DOORS

in private and public buildings

Many front doors, entrance doors, or apartment doors - especially if they have an overhead door closer - slam shut very loudly. Other doors do not close completely (even if they have a door closer), and remain a little open, which can pose a safety risk if left unlocked. Door dampers intercept the slamming doors, guide them slowly into the lock and keep them safely closed. This way, they prevent a lot of hassle for all residents.

Recommended products: VS 2000, V 1600, R 1400

DOOR DAMPERS FOR FIRE DOORS

e.g. for interlocks in underground parkings, basements or car parks

In so-called fire control interlocks it often happens that one of the doors doesn't close properly when the other one is closed due to a difference in air pressure. This is a major problem, because then there is no more fire protection. On the other hand, when one door is open, the other often slams shut - which can be frequently heard throughout the building and can be a nuisance for the occupants. The door damper for fire doors ensures both silence and safely closed doors. However, before installation, it is necessary to check with your country's regulations and the door manufacturer, whether an approval for the door damper is necessary.

Recommended products: V 1600 / V 1600F

DOOR DAMPERS FOR WALK-IN REFRIGERATOR DOORS

in food industry facilities with cold storage rooms

In many establishments like restaurant kitchens, butcher shops or bakeries, cold room doors are opened and closed a lot. In a hurry, people often don't pay attention to whether the doors are completely closed, which can happen due to the door's sealing. DICTATOR door dampers are used to make sure the door closes and thus prevent energy loss and, in the worst case, food deterioration. With them, the door can just be thrown shut and the door damper will make sure that it closes completely and remains closed.

Recommended products: VS 2000, V 1600

DOOR DAMPERS IN HOTELS AND RESTAURANTS

for entrance doors and room doors

Restaurants, cafes, bars and hotels are places where guests should not be disturbed by loud slamming doors. Door dampers make sure that doors always close quietly and reliably so that guests can fully enjoy their stay.

Recommended products: VS 2000, V 1600, R 1400

MORE APPLICATION AREAS

From room doors to office doors in company buildings to heavy industrial doors and gates, door dampers can be used on almost every type of door, as long as there is enough space for its installation.

Door damper VS 2000

The model with cased hook

CHARACTERISTICS

- Compact form: When the door is closed, the door damper and the hook look like a single unit
- Available in many finishes: chrome-plated or color-coated
- Robust construction: Thanks to its casing, the hook is extremely resistant
- Suitable for a wide range of door types and installation situations thanks to its closing force from 20 to 115 N

MOUNTING OPTIONS

- Suitable for overlapping and flush doors
- Installed vertically and centered on the upper edge on the hinge side of the door as standard
- Also suitable for horizontal installation 20 N, 35 N, 50 N

DIMENSIONS

All dimensions in mm

- Türstock > door frame
- Türoberkante > upper edge of door leaf
- Türblatt > door leaf

Dimension of X: On overlapping doors the included plastic spacers (2 mm, 3 mm and 10 mm thick) compensate for a height difference of up to 15 mm between door leaf and frame. More information on the dimensions of all mounting plates and brackets can be found under 'Installation accessories'.

TECHNICAL DATA

Type of doors	left opening and right opening hinged doors, flush and overlapping doors
Closing force	20 N; 35 N; 50 N; 80 N; 115 N
Damping characteristics	progressive
Closing speed	adjustable
Damping fluid	silicone oil
Material	steel; aluminium (hook)
Finish (steel)	bright chrome; satin chrome; coated in RAL colors
Components included	door damper, hook, 3 plastic shims (2/3/10 mm thick), screws for wooden doors

Door damper V 1600/V 1600F for fire doors

Universal model with the widest range of executions

Video

Website

CHARACTERISTICS

- Thanks to its cased cylinder the fixing screws are not visible
- Available in different colors and finishes: chrome-plated, color-coated, stainless steel
- Suitable for a wide range of door types and installation situations thanks to its closing force from 20 to 115 N
- The models V 1600F with 80 N and V 1600 with 50 N are approved for use on fire and smoke doors. More information can be found under 'Fire doors'

INSTALLATION OPTIONS

- Normally installed vertically on the pull side of the door
- Also suitable for horizontal installation (special model)
- Different hooks allow its installation on overlapping, flush and recessed doors (more information available under product details > choice of hook)
- There are different mounting plates available for installation on steel doors. Find out more under "Installation Accessories"
- Before installing it on fire doors it is necessary to check whether mounting plates are required for the installation on your fire or smoke door. For more information, see section product details > fire doors
- Installation on glass doors possible with special installation set. More information under 'Installation accessories'

TECHNICAL DATA

FIRE DOORS

Door damper V 1600/V1600F for the use on fire and smoke doors

Depending on your country's regulations, it is possible that the door damper may only be used on fire and smoke doors for which there is an existing approval that allows its installation. On many fire and smoke doors, it is necessary to use mounting plates for the installation of the door damper and the hook.

Please check which mounting plates you need for your particular door before ordering. Should you have any questions, we'll be happy to help.

Door damper Z 1000

Inexpensive basic model for lightweight doors

Website

CHARACTERISTICS

- With visible cylinder
- Nickel-plated or zinc-plated finish
- Thanks to closing forces from 20 to 80 N, suitable for a wide range of door types and installation situations

MOUNTING OPTIONS

- Can be used on overlapping, flush and recessed doors thanks to different hooks
- Installation on the pull side of the door
- For vertical installation only

CHOICE OF HOOK

- Hook 1009: for flush doors (-4 to +14 mm)

- Hook 1013: for overlapping doors (+15 to +30 mm)

- Hook 1011: for recessed doors (-5 to -22 mm)

Door damper H 1300

With reinforced joint for particularly heavy doors

Website

CHARACTERISTICS

- The reinforced joint and the longer roller lever ensure a long service life, even when installed on very large and heavy hinged doors
- Thanks to its progressive damping characteristic, it reliably cushions the closing of door, even when installed far away from the door hinges
- Only available with nickel-plated surface
- Suitable for a wide range of door types and installation situations thanks to its closing force from 20 to 115 N

MOUNTING OPTIONS

- Can be used on overlapping, flush and recessed doors using different hooks
- There are weld-on mounting plates available for narrow, steel door frames (see 'Installation accessories')
- Large mounting plates available for installation on thinner steel doors (see 'Installation accessories')

CHOICE OF HOOK

- Hook 1009: for flush doors (-1 to +13 mm)

- Hook 1013: for overlapping doors (+14 to +30 mm)

- Hook 1011: for recessed doors (-2 to -18 mm)

TECHNICAL DATA

Type of doors	hinged doors, right and left-handed, overlapping, flush and recessed
Closing force	20 N; 50 N; 80 N; 115 N

Door damper Junior

The smallest door damper

 Website

CHARACTERISTICS

- Prevents slamming of screen doors, doors in furniture, flaps and drawers
- Entirely of stainless steel
- Small dimensions
- Available as either push or pull model, both with the same dimensions (see 'Dimensions')
- The push and pull models only differ in the position of the roller lever

MOUNTING OPTIONS

- Thanks to its casing in stainless steel, suitable for a wide range of applications as e.g. in interior design, furniture, pharmacies and medical equipment, etc.
- Due to its small dimensions it can be installed even in very small spaces

DIMENSIONS

All dimensions in mm

- Left hook: part no. 392000 (push-execution)
- Right hook: part no. 392020 (pull-execution)

TECHNICAL DATA

Closing force	13 N
Damping characteristics	constant
Closing speed	not adjustable
Damping fluid	silicone
Material	stainless steel AISI 304

Door damper V 1600 for sliding doors

With a special mounting bracket for sliding doors

Website

CHARACTERISTICS

- Detailed information on the door damper V 1600 can be found on page 02.01.10
- The stainless steel mounting bracket allows its use on sliding doors
- The recommended force is usually 20 N, as otherwise the force required to open the door would be too high

DIMENSIONS

All dimensions in mm

Mounting bracket for sliding doors

Part no. 203037

INSTALLATION

Installation instructions

Door damper V 1600

Dimension of X with

- hook 1009 for flush doors: $X = 59$
- hook 1013 for overlapping doors: $X = 78$
- hook 1011 for recessed doors: $X = 39$

Mounting bracket sliding doors for V 1600, unequal angle (114 x 35 x 40 x 3 mm), stainless steel, with fastening material	203037

DOOR & GATE CLOSERS FOR HINGED DOORS

DICTATOR door closers feature a very high quality and a long operational life. They help solve problems for which conventional door closers cannot offer a solution.

Thanks to the many models solutions for the most different applications are possible: from garden and access gates, in residential buildings, public institutions and commercial properties with highly frequented doors up to industrial plants. Usually retrofitting is no problem.

We would be happy to assist you in choosing the appropriate product - just contact us!

TABLE OF CONTENTS - DOOR & GATE CLOSERS FOR HINGED DOORS

Gate closer DIREKT

Closes doors and gates reliably and securely - as fast or slow as you wish

Video

Website

CHARACTERISTICS

- Versatile use on gate leaves up to 1500 mm width and 100 kg weight (higher weights are often possible – please contact our advisory service)
- Perfect for retrofitting thanks to its multiple mounting accessories that allow many different installation possibilities
- Safe closing with continuous damping and no final latching action ensures protection of people
- Continuously adjustable closing speed

MODELS AND ACCESSORIES

- **Size and closing force:** We offer models with different stroke lengths and closing forces to suit different door/gate sizes and weights. More details can be found under 'Selection Criteria'
- **Finish:** grey, anthracite, white, AISI 304, AISI 316
- **Special models** with ball and socket joint on both ends for gates with ascending hinges
- **Optional accessories:** To prevent users from changing the closing speed, there is an additional adjustment lock available

FUNCTION

The gate closer DIREKT operates directly on the gate/door without the help of any lever. It is fixed with one end to the gate post or the door frame and with the other to the door or gate itself.

It operates similarly to a gas spring. When the gate is open, the piston rod of the gate closer is compressed and the pressure of the gas inside the gate closer acts on the piston. The piston rod extends and closes the door/gate. The cylinder of the gate closer contains hydraulic oil, which results in a controlled closing speed that is slowed down. By using nitrogen instead of a helical spring, much higher closing forces can be achieved. Thus the gate closer DIREKT always closes the door/gate reliably despite its small diameter.

TECHNICAL DATA

Closing speed	steplessly adjustable
Closing force	depending on model/installation type approx. 10 - 60 Nm
Material piston rod	chrome-plated steel, AISI 304, AISI 316L
Material cylinder	zinc-plated steel coated anthracite/grey/white, AISI 304, 316L
Material protection tube	aluminium coated anthracite/grey/white, AISI 304, AISI 316L
Opening angle	max. 110°
Weight per door leaf	up to about 100 kg, depending on model, custom solutions on request
Size per door leaf	max. height approx. 2500, width approx. 750 - 1500 mm, custom solutions on request

DIREKT 200

MODELS

Gate closer DIREKT 150 & DIREKT 200 without ascending hinges

Stroke length:

- 150 mm stroke: the standard model for most situations*
- 200 mm stroke: especially designed for wide gates or for those with hinges and posts in unusual positions.*

*For the selection of the appropriate stroke length, please refer to the section "Selection criteria"

Closing force:

- For smooth-running gates and doors that can latch into the lock without effort or that do not have a lock latch, a closing force of 400 N is enough
- If greater force is needed, then you should choose a model with 600 N
- With the help of an integrated valve, the closing force can be reduced on site by releasing gas - only if strictly necessary

Finish:

Gate closer DIREKT for ascending hinges

- Furnished with a ball and socket joint on each side and therefore slightly longer
- The mounting brackets have M8 threads for holding the threaded ends. In general, the same hinge distance as with the normal DIREKT 150 and DIREKT 200 must be observed
- It normally requires less force than the normal models, since the closing of the door is supported by its own weight due to the ascending hinges. The higher the gate ascends when opening and the heavier it is, the less closing force is required. Otherwise too much force would be needed to open. As a basic rule, if the door closes by itself without a gate closer, then the DIREKT with 100 N is the right solution.

SELECTION CRITERIA

Selecting the appropriate stroke length

Step 1: Check whether one of these hinge position applies to your application and whether the specified dimensions matches those of your door/gate.

Note: For different installation situations, please, contact our technical customer service.

Hinge position 1: Fitting the DIREKT 150 to gates with hinges welded onto one side

Hinge position 2: Fitting the DIREKT 150 to gates with hinges fixed on the middle

Hinge position 3: Fitting the DIREKT 150 to gates with adjustable hinges

Step 2:

- If the dimensions in step 1 match your application, you can use the DIREKT 150
- If the dimensions in step 1 cannot be met, check whether you can use the DIREKT 200

Note: The following drawing and the corresponding diagram for the DIREKT 200 are applicable to all hinge positions. The crucial factor is the distance from the center of the hinge to the center of one of the holes in the mounting bracket (measure A & measure B).

Example 1: If measure A is 105, measure B can be 30-70 mm.

Example 2: If measure A is 135, measure B can be 30-45 mm.

Step 3:

- If the dimensions in step 2 match your application, you can use the DIREKT 200
- If the dimensions in step 2 cannot be met, contact our technical customer service. In many cases, we can still provide a solution

For the selection of the closing force, please refer to the section "Models". Would you like help choosing a door closer? We will gladly help you find a suitable model for your application. Simply fill in this questionnaire.

Questionnaire

ACCESSORIES

Adjustment lock

The adjustment lock prevents users from changing the closing speed. There are two versions available:

Adjustment lock for DIREKT with eyelets: The adjustment lock is slipped over the eyelet and secured with two headless screws. The pressure on the thumb wheel prevents its unauthorized turning.

Adjustment lock for DIREKT with ball and socket joints (for ascending hinges): Here it is not possible to simply slip the adjustment lock on top of the wheel. Therefore this adjustment lock consists of two parts, which can be clipped on from both sides, screwed together and secured with an extra screw.

Tube door closer RTS

The 'invisible' door closer, especially for gates

Video

Website

CHARACTERISTICS

- Practically invisible, as it is built into the door: only the joint can be seen when door is open
- Often used on outside gates (garden gates, admission gates to industrial plants, etc.)
- Perfect solution for admission gates into industrial plants with access control which have to close reliably (Supply Chain Security)
- Its concealed installation protects it from the weather and makes it largely vandal-proof
- Its abrasion-resistant special joint is flexible so that the tube door closer can be used with different door hinges
- Depending on the door hinges, the doors can be opened up to 180°

TECHNICAL DATA

Type of doors	steel, wood & aluminum doors
Closing speed	adjustable
Material	steel
Finish	zinc-plated
Door weight	max. 80 kg
Door height	max. 2500 mm
Door width	750 - 1150 mm
Opening angle	90 - 180°, depending on the type of hinges used

Questionnaire

MODELS

	RTS-d & RTS-e	RTS-t & RTS-u	RTS-v
Door type	For steel and aluminium doors		Specifically for flush wooden doors (min. 40 mm thick), fitted with tube door closer during the manufacturing process
Differentiating features	RTS-d and RTS-e only differ in the position of the holes on the front plate (see drawings in the section 'dimensions'). Due to its fixing holes the RTS-e can be used as replacement for GEZE ROR TS 450 tube door closer.	RTS-t and RTS-u tube door closers only differ in the position of their adjustment groove in the joint. RTS-t: Installation on top of DIN left doors, on bottom of DIN right doors RTS-u: Installation on top of DIN right doors, on bottom of DIN left doors	-
Assembly notes	These types are preferably installed in the middle cross profile.	Suitable for installation either on the top or the bottom of the door.	The tube door closer can be installed at any position, preferably centered between the hinges.

RTS t/u

Installation
instructions
RTS v

The RTS tube door closer can be mounted into a wide range of door models with different types of hinges due to its flexible joint. Nevertheless, certain hinge dimensions must be observed. Dimensions W, X and Y given in the drawings must be necessarily observed; otherwise the opening angle, latch action and closing will be affected and the RTS tube door closer could get damaged. Should you have any questions, please contact our Technical Customer Service.

Installation on aluminium and steel doors

Installation on flush wooden doors

Installation on gates with screw-hinges (Opening angle max. 90° to 100°).

Warning: use angled eyelet!

When the RTS door closer is installed in gates with screw hinges, the angled eyelet has to be used.

Closing spring Piccolo

Closing spring in compact design

Website

CHARACTERISTICS

- Suitable for light doors (e.g. interior doors, in kitchen, toilets, restaurants, etc.)
- Available in black, white, nickel-plated or stainless steel
- Stainless steel model especially suitable for use on exterior doors or in humid environments
- Adjustable spring force
- In order to increase the closing force, it is possible to use more than one Piccolo
- Special models for special applications available upon request

FUNCTIONALITY

- When the door is opened, the built-in spring is tensioned
- The spring force is applied directly to the door by the push plate
- The closing spring closes the door immediately after the door is released

Together with the closing spring Piccolo, we recommend the use of a DICTATOR door damper, so that the door is damped and gently pulled closed before slamming shut.

DIMENSIONS

All dimensions in mm

TECHNICAL DATA

Closing force	10 - 50 Nm
Material	nickel-plated steel, black-coated steel (RAL 9005), white-coated steel (RAL 9010), stainless steel AISI 304, stainless steel AISI 316
Components included	closing spring; 3 washers
Opening angle	max. 90°

INSTALLATION

Closing spring D2a / D4

Closing spring with operating arm

Website

CHARACTERISTICS

- Simple and affordable closing device
- Apt for nearly every door
- Adjustable spring force
- Available with different spring forces

TYPES

- **D2a:** for light doors
- **D4:** for heavier doors
- **Stainless steel models:** for outside doors or doors in humid environments

FUNCTIONING

- The adjustable spring force is transferred to the door by an operating arm running on a small roller fixed to the door
- The spring arm can be folded up so that the function of the closing spring can be temporarily suspended and the door remains open

In addition to the closing spring Adjunkt D2a/Adjunkt D4, the use of a DICTATOR door damper is recommended so that the door is damped and closes gently and doesn't slam shut.

TECHNICAL DATA

Closing force	10 - 50 Nm
Material	steel nickel-plated; stainless steel AISI 304
Components included	closing spring; roller; tensioning pin

Jamb closer Adjunkt

Invisible jamb closer for wooden and steel doors

Website

CHARACTERISTICS

- Can be installed at any height of the door leaf
- Adjustable closing force (depending on the type of door hinges)
- For both flush and overlapping doors
- Maintenance-free, although occasional oiling of moving parts improves efficiency and durability
- The visible parts of the E 22/2550 are also available in stainless steel (model with rounded front plate)

MODELS

- **E 16/2500**: with rectangular front plate (zinc-plated steel), for small wooden doors
- **E 22/2550**: with rounded front plate (stainless steel)
- **E 22/2550**: with rectangular front plate (zinc-plated steel)

In order to dampen the closing of the door, we recommend the use of a door damper together with this closing spring.

TECHNICAL DATA

Jamb closer Adjunkt E16/2500

Diameter of spring tube	Ø 16 mm
Opening angle of door	up to 180°
Closing performance	0 - 150°, depending on hinges
Closing force	5 - 15 Nm
Material	Spring tube: aluminium; Front and anchor plates: zinc-plated steel
Components included	closing spring; counter plate; tensioning pin

Jamb closer Adjunkt E22/2550

Diameter of spring tube	Ø 22 mm
Opening angle of door	up to 180°
Closing performance	0 - 150°, depending on the hinges
Closing force	15 - 30 Nm

Floor spring WAB 180

For heavy doors up to 600 kg

Website

CHARACTERISTICS

- For decades, consistently proven to be highly reliable, especially on heavy entrance doors e.g. churches, museums, public buildings, etc.
- Special axle bearings in the oil chamber allow its use on very heavy doors up to 600 kg
- High load capacity and long operational life
- Closing speed can be continuously adjusted
- A safety valve prevents vital parts of the floor spring from breaking, even when the door is forced shut
- All floor springs come with an embedding box
- Different cover plates, pivot hinges and straps, either for steel or wooden doors available as accessories
- Also available as a mere floor support for heavy doors where the closing function is not needed

SELECTION CRITERIA

The WAB 180 floor spring is available in five different models. Please indicate the dimensions and the approximate weight of the door and the opening direction according to DIN when ordering.

The following table will help you to choose the correct size for your application. All data refer to a door height of minimum 1.75 m and maximum 2.5 m, without wind load. In case of exterior doors exposed to wind or interior doors in surroundings with high pressure differences, please contact our technical customer service.

Door weight / kg	Door width / m*	Size of floor spring
100 - 200	max. 1.15	II
	max. 1.40	III
200 - 300	max. 1.15	III
	max. 1.40	IV
300 - 400	max. 1.15	IV
	max. 1.40	V
400 - 500	max. 1.40	V
	max. 1.55	VI
500 - 600	max. 1.55	VI

* In case of differing door widths or doors exposed to wind or pressure difference, please contact us.

TECHNICAL DATA

Door weight	max. 600 kg
Door types	steel doors, wooden doors (single-action)
Closing function	starting at about 160° (door may be opened up to 180°)
Speed (standard)	continuously adjustable damping from 45° of closing angle
Closing torques	depending on the spring force 20 - 45 Nm
Hold-open	without hold-open
Material housing	aluminium
Accessories	cover plates, straps, pivot hinges, push lever

INSTALLATION

Usually the floor spring is installed parallel to the door but shifted sideways. It can also be mounted with the axle directly below the door.

Installation instructions

For this purpose, a straight strap is required as an accessory along with a swing hinge as the upper hinge.

Please make sure during installation that there is a stop installed in the closed position of the door. For double-leaf door systems, a separate door sequence control must be installed.

DOOR CLOSERS AND ACCESSORIES FOR SLIDING DOORS

Sliding doors are becoming increasingly important in modern architecture as they offer a space-saving solution. The type of doors differs not only in size and material, but also in the type of tracks used.

DICTATOR sliding door closers are characterized by their high flexibility. Depending on the application, the components can be combined in different ways, taking into account the size of the door, the track, the frequency of operation, etc., in order to find the ideal solution.

We will be happy to help you choose the right product – just contact us!

DICTAMAT 50 - General information

Website

DICTATOR supplies a very flexible mechanical closing system for small and medium-sized sliding doors, the DICTAMAT 50. The series combines a spring rope pulley and the patented LD lamellar radial damper. Together they ensure reliable closing of sliding doors - with controlled closing speed.

ADVANTAGES

- Adjustable closing speed depending on requirements
- Closing forces from 25 to 100 N
- Suitable for working paths up to 4 m
- Powerless closing solution
- Can be mounted on a wide range of rail systems
- Test certificates according to 1634-3 and EN 1191 available
- If the door should not close again immediately after opening, the mechanical timer can be used. It keeps the door open for an adjustable period of time without current.

An electrically operated alternative is the DICTAMAT OpenDo, a compact sliding door operator that automates smaller sliding doors by motor.

MODELS IN OVERVIEW

DICTAMAT 50 BK - MODULAR SYSTEM

The modular system DICTAMAT 50 BK is absolutely flexible and universally suitable version of the DICTAMAT 50.

It can simultaneously move both leaves of double-leaf sliding doors. Due to its modular design, the DICTAMAT 50 BK can easily meet special space requirements.

A rotating toothed belt or rope always ensures safe and reliable operation. For this reason, the individual components of this model can also be mounted separately anywhere space is available without the risk of the hauling rope slacking.

Spring rope pulley, radial damper and idler pulley are supplied with installation accessories to enable them to be attached directly to the rail or to the ceiling. Special mounting accessories for wall installation are also available upon request.

More details on page 02.03.06.

DICTAMAT 50 KP/KW - COMPACT UNITS

The DICTAMAT 50 is also available as a compact unit for certain applications. Here, all necessary components are combined into a single unit. The compact units are only to be used if the doors are located in buildings. They are not suitable for use on ships or trains with different angles of inclination. In case of intervention in the closing process by hand (e.g. door is pushed shut by hand), the rope may possibly slack.

- **DICTAMAT 50 KP:** compact unit with carrier plate for mounting below the rail, with single pull rope. For use on single-leaf doors only.
- **DICTAMAT 50 KW:** compact unit with carrier bracket for mounting on top of the rail, with single pull rope. For use on single-leaf doors only.

More details on page 02.03.12.

SPECIAL SOLUTIONS

The DICTAMAT 50 series allows countless special solutions for special requirements, e.g. it can also open doors instead of closing them. Contact us for a free consultation.

DICTAMAT 50 BK - modular system

The flexible modular system

Video

Website

CHARACTERISTICS

- Ideal solution for doors with high frequency of use, different users, such as in trains, ships, etc.
- The transmission of the closing force as well as the control of the closing speed is continuously effected by means of a revolving steel cable
- The modular system features absolutely reliable function, even under demanding operating conditions
- Due to its modular structure, it is also perfectly suited for places where there isn't much space available, as all its components can be mounted in a flexible way.
- Due to its modular design, ideal if there's only limited space available, as the individual components are flexible in their installation
- Also for double-leaf sliding doors with synchronized leaves
- Available in ready-made sets or with components put together individually
- Models available in stainless materials
- Successful tests in compliance with relevant fire protection standards allow inclusion in approvals of sliding fire doors

Technical manual

STRUCTURE

The components of the DICTAMAT 50 BK can be combined at will. For the most common applications standard kits have been prepared. When they cannot be used, the components can be combined individually. Depending on the available space, the components of the modular system can be mounted in different positions. For designers there are nearly no limits to develop own object specific solutions. Of course, DICTATOR will be happy to assist you in realizing your ideas.

COMPONENTS

	Standard sets	Options for special solutions
Closing device	spring rope pulley with sliding hub, diameter series 118 mm, force depending on model 25 N, 50 N or 80 N	double spring rope pulley diameter series 118 mm spring rope pulley diameter series 177 mm counter weight provided on site
Control of closing speed	lamellar radial damper LD 50	lamellar radial damper LD 50 with special oil lamellar radial damper LD 100
Damping transmission	revolving rope Ø 2 mm	other rope or toothed belt types
Idler pulley	for rope	special type according to damping transmission
Door actuator	for rope	special type according to damping transmission
Door actuator for second door leaf	-	has to be ordered separately

STANDARD SETS

The different standard sets of the DICTAMAT 50 BK modular system are suitable for most sliding doors. The main difference between them is the closing force of the spring rope pulley. The standard sets are come with a LD radial damper corresponding to the closing force of the spring rope pulley.

MATERIAL COMPONENTS

Component	Material
LD 50 Radial Damper	casing flame retardant DOM-AMID plastics, rope pulley aluminum with Vulkollan insert
Revolving steel rope	steel / AISI 304 or AISI 316
Brackets	zinc-plated sheet steel, alternatively AISI 304 or AISI 316
Idler pulley	polyamide

COMPONENTS INCLUDED

- Spring rope pulley with bracket and plastics rope
- LD 50 radial damper with rope pulley and mounting bracket set for horizontal or vertical mounting
- Idler pulley for rope with rope coming-off prevention and mounting bracket set
- 8 m steel rope Ø 2 mm (revolving rope)
- Door actuator with rope tensioner

Accessories:

- Door actuator for second door leaf with additional compensation spring and rope clamp
- Adapter plates and brackets for LD 50 radial damper and idler pulley

DICTAMAT 50 KP or KW - compact unit

The compact sliding door closer

Website

CHARACTERISTICS

- All components are pre-assembled in a compact, easy-to-install unit on a mounting plate or bracket
- Available in two models:
 - **DICTAMAT 50 KP:** with mounting plate, for mounting below the rail
 - **DICTAMAT 50 KW:** with mounting bracket, for mounting above the rail
- For areas with instructed users, as manual interference in the closing process may result in slack rope formation
- The pull rope of the spring rope pulley is guided directly over the pulley of the radial damper to the door, i.e. the control of the closing speed takes place directly at the pull rope of the spring rope pulley
- When choosing, it should be noted that there are different versions for right- and left-closing doors for the KP

Technical manual KP

Technical manual KW

FUNCTIONING PRINCIPLE DICTAMAT 50 KP

Blue: closing function | **Orange:** damping

FUNCTIONING PRINCIPLE DICTAMAT 50 KW

Blue: closing function | **Orange:** damping

MATERIAL

LD	casing flame retardant DOMAMID plastics, rope pulley aluminium with Vulkollan insert
Plastic rope	flame retardant Kevlar rope with polyester coat, approx. Ø 2 mm, with cable eye stiffener
Brackets	zinc-plated sheet steel, alternatively AISI 304 or AISI 316
Idler pulleys	polyamide

DICTAMAT 50 KP

- Designed for installation underneath the rail.
- The pull rope of the spring rope pulley is guided via the radial damper and an additional guiding pulley directly to the door.
- When choosing this model, please take into consideration that you need a different version depending on whether the door closes to the left or the right.

COMPONENTS INCLUDED

- Carrier plate with spring rope pulley
- 2 m of plastic rope
- Pressure roll
- Rope coming-off prevention
- Radial damper with rope pulley
- Accessories: Different covers on demand

DIMENSIONS

DICTAMAT 50 KW

- Intended for installation on top of the rail. An universal carrier bracket offers different fixing possibilities.
- The compact unit KW combines the spring rope pulley, the radial damper with pressure roll and another deflection roll for the rope of the spring rope pulley all on a carrier bracket.
- The pull rope of the spring rope pulley runs via the rope pulley of the radial damper and the height adjustable deflection roll (30 mm of adjustment range) to the door leaf.

COMPONENTS INCLUDED

- Carrier bracket with spring rope pulley
- 2 m plastic rope
- Pressure roll
- Rope coming-off prevention
- Radial damper with rope pulley
- Deflection roll

Adjustment range of DICTAMAT 50 damping force

The diagram shows the setting options for the damping force for the DICTAMAT 50 with different strengths.

Closing force / travel of spring rope pulley

The curves and force specifications marked in red apply to the double spring rope pulleys.

Spring rope pulley diameter series 118

For closing sliding doors

Website

CHARACTERISTICS

- Simple, efficient and cost-effective closing device for sliding doors
- During the opening of the door the internal spring is tensioned and then automatically pulls the sliding door closed
- Available with different forces: 25 N, 50 N, 80 N or 100 N (only as double spring rope pulley)
- Closing force can be adjusted by pretensioning the spring
- Thanks to its material and the absolutely accurate fitting of the hub, the spring rope pulley also works very silently, without any annoying noise.

As components of the sliding door closer DICTAMAT 50 the spring rope pulleys with 25 and 50 N have also been approved for use on smoke and fire doors.

The closing speed, however, is not controlled when using just a spring rope pulley for closing. If for safety or functional reasons a controlled closing speed is required, we recommend to use the DICTAMAT 50 sliding door closer. It incorporates the spring rope pulley as closing device.

TECHNICAL DATA

Closing force	25 N; 50 N; 80 N
Material	casing DOMAMID plastics; Kevlar rope with polyester coating

MODELS

Depending on how it's installed and the desired comfort of use, there are two spring rope pulleys available:

- **Spring rope pulley with inner square:** for mounting on an 8 mm square bolt or with a M8 square necked mushroom head bolt
- **Spring rope pulley with sliding hub and bracket:** Generally this model should be used. The tensioning screw together with the sliding hub allows to easily adjust the closing force and adapt it to the requirements. The double spring rope pulley always has a sliding hub.

For the double spring rope pulley 2 spring rope pulleys with the same force (2 x 25 N or 2 x 50 N) are coupled, thus providing the double force. The double spring rope pulleys are always used when with the same force a longer travel is needed than the single spring rope pulleys provide.

COMPARISON OF THE MAX. WORKING TRAVEL

- Spring rope pulley 25 N: 1.80 m
- Spring rope pulley 50 N: 1.50 m
- Double spring rope pulley 50 N (2 x 25 N): 1.80 m
- Spring rope pulley 80 N: 1.00 m
- Double spring rope pulley 100 N (2 x 50 N): 1.50 m

INSTALLATION

Installation instructions

DIMENSIONS

All dimensions in mm

Spring rope pulley with sliding hub and bracket**Mounting plate for spring rope pulley with sliding hub**

Part no. 070114

If the spring rope pulley has to be fixed to the wall or ceiling, we recommend to use this mounting plate. You simply have to fit the spring rope pulley to the headless pins of the mounting plate and then screw the mounting plate to the wall/ceiling.

Spring rope pulley with inner square

Part no. 070113

The inner square of the spring rope pulley is end-to-end. In fact the entry on both sides is staggered by exactly 90° and thus procures a safe seat for a square bolt provided on site or the square bolt of the mounting bracket.

Spring rope pulley with mounting bracket

Part no. 070113

The mounting bracket makes mounting of the spring rope pulley much easier, if there is no square bolt provided on site. If required, the mounting bracket has to be ordered in addition to the spring rope pulley.

Double spring rope pulley, mounting plate fixed lengthwise

Double spring rope pulley, mounting plate fixed crosswise

CLOSING FORCE / TRAVEL

The curves and force specifications marked in red apply to the double spring rope pulleys.

Spring rope pulley diameter series 177

For closing sliding doors - for courses of up to 4 m

Website

CHARACTERISTICS

- Used for longer travels
- The maximum travel distance is 4 m
- The maximum closing force 100 N
- This model is always supplied with sliding hub and bracket which makes mounting and adjusting very simple
- The standard version of this diameter series is fabricated with a plastic rope but, on demand, it is also possible to furnish it with a steel rope

DIMENSIONS

All dimensions in mm

Spring rope pulley Ø 177, 100 N with sliding hub, bracket zinc-plated	070066

Release buffer

Pushes sliding doors out of wall pocket

Video

Website

CHARACTERISTICS

- Available with two different spring forces
- The model with 85 N is the one normally used in most doors
- The stronger version should only be chosen for doors that are more difficult to move, e.g. doors with a brush seal
- Concealed installation on the opening edge of the door

FUNCTION

- When opening the door the magnet buffer on the piston rod hits a counter plate and keeps the door open
- To close the door, just press lightly against its edge and the integrated spring will push the door out of the wall pocket so far that the handle is accessible again

DIMENSIONS

All dimensions in mm

TECHNICAL DATA

Door type	Sliding doors
Approx. extension force	85 N; 130 N

Release buffer for sliding doors, force 130 N	500262

Mechanical timer

Adjustable hold-open time for sliding door closers - completely without power

Video

Website

CHARACTERISTICS

- Used on sliding doors that should remain open for a while before closing again, e.g. to allow a bed to be pushed through in hospitals
- Strictly mechanical, without electricity
- Based on the same hydraulic operating principle of door dampers, but with the opposite effect: a valve in the cylinder limits the flow rate of the oil. This determines the time after which the roller lever is completely folded down again and thus no longer held back by the hook. The door can close again.
- Installed with the door in open position
- Adjustable delay time
- Opening time dependent on the closing force of the closing device used

DIMENSIONS

All dimensions in mm

TECHNICAL DATA

Type of doors	sliding doors
Material	zinc-plated (casing), stainless steel (fixing bracket); satin-chrome aluminium (hook)
Delay time	Adjustable - duration depends on closing force of the closing device (see diagram)
Possible closing devices	Sliding door closer DICTA-MAT 50, spring rope pulley, counterweight
Components included	Mechanical timer, hook 1020 with large hole, mounting bracket, fixing screws for wooden doors

Description	Part no.
Mechanical timer adjustable, zinc-plated, with mounting bracket and hook 1020	500270

BACK CHECKS

They slow down doors / windows that open too fast and limit their opening angle. Thus they prevent damages to the door and the hinges.

Beside the damage this could cause to the door, fittings and possibly the wall, doors opening at an uncontrolled speed also present a risk of accident not to be underestimated.

Back checks are used on doors which could slam open against a wall or some other obstacle by gusts of wind, breeze or just simply by being torn from the users' hand when opening.

TABLE OF CONTENTS - BACK CHECKS

Back checks

Prevent uncontrolled opening of hinged doors and windows

Video

Website

CHARACTERISTICS

- Dampens doors/windows in the opening direction and limits the opening angle
- Various models cover a wide range of applications: from lightweight interior doors and windows to very large/heavy doors with high loads
- Many models can be used in combination with overhead door closers
- Installation accessories available for a wide range of situations
- Optionally with integrated hold-open in open position
- Material: steel, painted cylinder (standard: RAL 9006), many models are available in AISI 304, AISI 316

OUR SERVICE

To ensure that you get the best product for your application, our technical customer advisors will be happy to determine the right model for you, including the fixing points. Please fill out our questionnaire and send us photos of the interior and exterior view of the door/window.

STANDARD SERIES OVERVIEW

Series	TB 10-23	TB 14-28	TBP 10-29	TBR 14-35
Series abbreviation	<i>TB=Back checks with standard damping</i>		<i>TBP=Back checks with gradual damping</i>	<i>TBR=Back checks with adjustable damping</i>
Application area	For small / light doors	For medium and heavy doors with high (wind) load	For medium-sized and heavy doors with frequent operation or for doors with high requirements in terms of convenience	For extreme operating situations
Common applications	Interior doors	Industrial doors; exterior doors which are not operated frequently, e.g. side entrance doors	Frequently used doors, e.g. entrance doors to public buildings, schools; with high requirements in terms of convenience	Oversized doors and gates
Damping behavior <i>Values may vary depending on installation situation and stroke length</i>	Damping from approx. 40° opening angle	Damping from approx. 40° opening angle	Gradual / increasing final damping from approx. 55° opening angle	Damping from approx. 40° opening angle, with adjustable damping force
Options for damping adjustment	Start of damping can be delayed by reducing the oil filling quantity	Start of damping can be delayed by reducing the oil filling quantity	None	Damping force can be adapted
Can be combined with overhead door closers	No	Yes (stroke length 300/400 mm)	Yes (stroke length 300/400 mm)	No
Stroke length standard models	250 mm	250, 300, 400 mm	250, 300, 400 mm	300, 400, 500 mm

You can find more stroke lengths and information on the TBR 10-28 series on the following pages.

TECHNICAL DATA

Material standard models	Piston rod hard chrome-plated; cylinder steel painted to RAL 9006 satin finish; fittings and installation accessories zinc-plated as standard
Cylinder paint options	The cylinder can be painted in other RAL colors upon request. There are some preferred colors that are available with relatively short lead times and at a lower surcharge: RAL 7040, 7016, 9005, 9007, 9016 (all satin matt). For more details, see section "Material".
Stainless steel models	The series TB 10-23 & 14-28 and TBR 10-28 & 14-35 are available in AISI 304 and AISI 316
Door weight	max. 200 kg; heavier doors upon request
Max. possible opening angle	120°, depending on model and installation situation maybe lower
Optional function	Integrated hold-open in open position
We offer many custom solutions for different specifications. Just contact us.

Accessories for back checks

Installation accessories for back checks

DICTATOR offers a wide range of installation accessories for back checks for almost every application. On our website you will find the most common application situations illustrated with the appropriate accessories.

We will be happy to advise you on selecting the right model and accessories, including fixing points. Please feel free to contact us.

TABLE OF CONTENTS

■ Accessories for back checks with ø 8 mm eyelets

Most back checks (series TB 10-23, TB 14-28 and TBP 10-29 as well as some versions of the TBR 14-35 series) have eyes with a diameter of 8 mm. The following accessories are available for these models.

■ Accessories especially for doors with overhead door closers

The back checks can easily be used in conjunction with overhead door closers. Depending on the installation situation, special fixing accessories may be required.

■ Accessories for back checks with ø 10 mm eyelets

In the TBR 14-35 series, there are back checks with ø 10 mm eyes that are used in extreme situations. There are also special fixing accessories for these versions.

ACCESSORIES

All dimensions in mm

Accessories for back checks with Ø 8 mm eyelet

Mounting pin TB Ø 8 mm

Distance D = 25 mm

- Zinc-plated: part no. 205511
- AISI 304: part no. 205512
- AISI 316 : part no. 205513

Distance D = 45 mm

- Zinc-plated: part no. 205514
- AISI 304: part no. 205515
- AISI 316 : part no. 205516

Bracket TB 70x45x36 mm (without mounting pin)

- Zinc-plated: part no. 205489
- AISI 304: part no. 205490
- AISI 316 : part no. 205491

Mounting bracket (part of sets 1, 2 & 3)

- Zinc-plated: part no. 205197
- AISI 304: part no. 205249
- AISI 316: part no. 205455

Counter plate to bracket no. 205197

The counter plate is used when fixing the mounting bracket on thin-walled steel doors.

- AISI 304: part no. 205468

Mounting plate TB 80x25 mm, 2 threaded holes M5

The mounting plate is intended for fixing the mounting bracket no. 205197 on e.g. glass doors with an aluminium frame

- AISI 304: part no. 205479

Mounting plate TB 220x46 mm

The mounting plate is used together with the mounting bracket TB 70x45x36 mm, when high forces apply.

- Zinc-plated: part no. 205503
- AISI 304: part no. 205504
- AISI 316 : part no. 205505

Mounting flange TB Ø 42 mm, mounting pin Ø 8 mm
(part of set 2)

- Zinc-plated: part no. 205261
- AISI 304: part no. 205281

3 x Ø5,4 x 120

Bracket TB 50x40x20 mm, mounting pin Ø 8 mm
(part of set 3)

- Zinc-plated: part no. 205263
- AISI 304: part no. 205258

Bracket TB 40x40x40 mm, mounting pin Ø 8 mm

- Zinc-plated: part no. 205262
- AISI 304 : part no. 205282
- AISI 316 : part no. 205456

Bracket TB 180x70x53 mm (without mounting pin)

The bolt of the mounting bracket can be fitted either pointing upwards or downwards.

- Zinc-plated, part no. 205462-W

Accessories specially for doors with overhead door closer

The door opening limiter can also be used in conjunction with an overhead door closer without any problems. Depending on the installation situation special fixing accessories are required.

Bracket TB-OTS 140x45x90 mm (without mounting pin)

- Zinc-plated: part no. 205492

Bracket TB-OTS 50x20x30 mm, mounting pin Ø 8 mm

- Zinc-plated: part no. 205276

Bracket TB-OTS 250x106x90x84 mm (without mounting pin)

- Zinc-plated: part no. 205507 (DIN left)
- Zinc-plated: part no. 205508 (DIN right)

When selecting this bracket, please note that the specified DIN direction applies to installation on push side.

Accessories for back checks with Ø 10 mm eyelet

Mounting pin TB Ø 10 mm

Distance D = 25 mm

- Zinc-plated: part no. 205517
- AISI 304: part no. 205518
- AISI 316 : part no. 205519

Distance D = 45 mm

- Zinc-plated: part no. 205520
- AISI 304: part no. 205521
- AISI 316 : part no. 205522

Mounting Plate TB 45x220 mm

The counter plate, part no. 205461, has the same dimensions and features 6 threaded inserts M6.

- Zinc-plated: part no. 205460

Mounting flange TB 65x25 mm, mounting pin Ø10 mm

The mounting flange is intended for narrow door frames. The holes have Ø 6 mm with a countersink for ISO 7721 countersunk head screws.

- Zinc-plated: part no. 205469

Bracket TB 70x45x36 mm (without mounting pin)

- Zinc-plated: part no. 205489
- AISI 304: part no. 205490
- AISI 316 : part no. 205491

Mounting plate TB 220x46 mm

The mounting plate is used together with the mounting bracket TB 70x45x36 mm, when high forces apply.

- Zinc-plated: part no. 205503
- AISI 304: part no. 205504
- AISI 316 : part no. 205505

Bracket TB 180x70x53 mm (without mounting pin)

The mounting pin of this bracket can be fixed showing either up or down.

- Zinc-plated: part no. 205462-W

DOOR HOLDERS

DICTATOR door holders stand out for their robust construction and attractive design.

The door holder ZE is intended to keep doors in any position.

Should the door always be kept open in the same position and avoid having to fix or release the door holder every time when opening/closing the door, the door stop and buffer is the right choice.

TABLE OF CONTENTS - DOOR HOLDERS

	Page
 Door holders ZE 02.05.04 Keeps the door in any position	
 Door stop and buffer 02.05.06 Holds the door open in a determined position	

Subject to technical changes. No claim for compensation in case of errors.

Door holder ZE

Locking of doors in any position

Website

CHARACTERISTICS

- Very solid and robust design
- Comfortable operation by foot
- Very resistant, even against vandalism, as the housing is made of a single casting
- The door holders are made of non-rusting materials (all metal parts are aluminium / stainless steel) and thus perfect for outdoor use outdoors or in humid environments
- Firm hold even on very smooth or uneven floors, thanks to an integrated spring that firmly presses the foot against the floor.

DOOR HOLDER ZE SERIES

- **Standard series:** robust and inexpensive version with strokes from 25 mm to 105 mm
- **Design Line series:** highly compact design, even with long stroke length from 80 mm to 200 mm, in which the piston rod is not visible when retracted

VERSIONS

Model	Stroke	Color	Series
ZE 25	25 mm	satın-finished silver (RAL on demand)	Standard
ZE 60	60 mm	satın-finished silver jet black RAL 9005	Standard
ZE 75	75 mm	satın-finished silver (RAL on demand)	Standard
ZE 80	80 mm	satın-finished silver white RAL 9010 jet black RAL 9005	Design Line
ZE 90	90 mm	satın-finished silver jet black RAL 9005	Standard
ZE 105	105 mm	satın-finished silver (RAL on demand)	Standard
ZE 120	120 mm	satın-finished silver white RAL 9010 jet black RAL 9005	Design Line
ZE 160	160 mm	satın-finished silver white RAL 9010 jet black RAL 9005	Design Line
ZE 200	200 mm	satın-finished silver white RAL 9010 jet black RAL 9005	Design Line

TECHNICAL DATA

Stroke length Standard Line	25; 60; 75; 90; 105 mm
Stroke length Design Line	80; 120; 160; 200 mm
Material	Aluminium (casing); stainless steel/plastic (other components)
Finish Standard Line	Silver; black (RAL 9005); other finishes on demand
Finish Design Line	Silver; black (RAL 9005); white (RAL 9010)
Components included	Door holder, fixing screws

OPERATION

The door is held in the desired position simply by pressing down the piston rod. In the Standard series, this is done via the rubber nub at the top of the door stop, in the Design Line series with the metal foot, at the bottom of the housing. A small spring firmly presses the foot against the floor, preventing it from slipping away.

To release the hold-open simply step down on the metal plate above the housing (Standard) or at the bottom of the housing (Design Line). The piston rod automatically moves upwards and the door can be operated freely again.

Door stop and buffer

Holds the door open in a determined position

Website

CHARACTERISTICS

- Inconspicuous design
- Adjustable holding force
- Due to its flat design, it does not represent an obstacle
- Thanks to its aluminium casing, the door holder can also be installed outdoors
- The flat plate is fixed to the floor on the spot in which the door is to be held open
- The rubber buffer on the plate gently slows down the door when thrown open, thus protecting both door and hinges

FUNCTION

- Stops the door gently when opening
- Prevents door from opening beyond the desired angle
- Holds the door open in the desired position

DIMENSIONS

All dimensions in mm

TECHNICAL DATA

Door weight	max. 40 kg
Door height	max. 2200 mm

SWING DOOR HINGES

DICTATOR swing door hinges assure a safe and controlled closing of swing doors. They swiftly and reliably return the swing door to the closed position, which also considerably reduces irritating noise.

They are used in a large variety of applications: small swing doors in counters, large, heavy-duty swing doors, swing doors in trucks or machines.

Different finishes and materials are available for every optical requirement, as well as completely rustproof executions or affordable models, all of them, of course, with the same quality and life time.

TABLE OF CONTENTS - SWING DOOR HINGES

Swing door hinges HAWGOOD 4000 and 4500

For doors up to 26 kg and 30 mm thick

Video

Website

CHARACTERISTICS

- Long service life, with little maintenance necessary
- Shoe available in different materials and colors: nickel-plated, brass, grey or black plastic
- Zinc-plated steel or stainless steel plate
- Integrated hold-open at about 90° in both directions
- The door comes to a stop quickly and therefore makes little noise
- Due to their design, the passage width is only marginally smaller
- The model with stainless steel plate and plastic shoe is also suitable for humid environments and outdoor use

MODELS

- **Door thickness:** Type 4000 is designed for 19 - 24 mm thick doors; type 4500 for 25 - 30 mm thick doors
- **Finish:** For more sophisticated architectural solutions, there are brass shoes available (brushed or nickel-plated). The abrasion-proof plastic (light grey or black) are just as high-quality and durable, and more inexpensive
- **Spring force:** depends on the number of springs (E = 1 spring, D = 2 springs)

SELECTION CRITERIA

This table helps you determine the correct swing door hinge size, depending on the width, height and weight of the door. Generally, you use either a pair of the "E" or "D" type per door.

For swing door hinges type 4000 or 4500 the maximum door weight is 26 kg. In case your door is heavier or has different dimensions to the ones in the table, please contact our technical customer service.

- E = 2 x simple spring (1 pair)
- D = 2 x double spring (1 pair)

Questionnaire

Swing door hinges HAWGOOD 40K and 41K

For doors up to 50 kg and 35/40 mm thick

Website

CHARACTERISTICS

- Equipped with a hold-open at approx. 90°
- The abrasion-resistant special plastic of the swing door hinge ensures a long operational life even under heavy use
- The plastic shoes are shaped in such a way that their contours can be easily recessed in the door using standard frasers
- There special bushes (patented bolts) included, which allow a safe and stable fastening, even on doors with hollow profiles

MODELS

- **Door thickness:** Available with two different inner dimensions of the shoe, for door thicknesses of 35 mm / 40 mm
- **Spring forces:** Types 40K and 41K differ in their spring forces (recognizable by the plastic sleeve of the spring pin: Type 40K grey, Type 41K black).
- **Surfaces:** stainless steel model is particularly suitable for use in damp environments or outdoors

SELECTION CRITERIA

Determining the required swing door hinges depends on the size and weight of the door

Questionnaire

$$K = \frac{G \times 1/2 B}{H}$$

Legend:

- K: factor for choosing the type
- G: weight of the door in kg
- H: height of the door in mm
- B: width of the door in mm

1. Calculate K factor using the formula.
2. Depending on the calculated factor K, look up which type should be installed on top and which at the bottom of the door using this table.
3. In case the calculation of factor K doesn't result in a suitable combination of swing door hinges, check if you could use another HAWGOOD model or contact our technical customer service.

K	I	III	G (kg)
< 4	1 x 40K	1 x 40K	< 20
4 - 6	1 x 41K	1 x 40K	20 - 30
6 - 10	1 x 41K	1 x 41K	30 - 50

TECHNICAL DATA

Door thickness	35 mm; 40 mm
Door weight	max. 50 kg
Door height	max. 2000 mm
Door width	max. 1000 mm
Opening angle	max. 100°
Hold-open	at about 90°
Material	Plastic (shoe), zinc-plated steel (plate); Plastic (shoe), stainless steel AISI 304 (plate)

Swing door hinges HAWGOOD 41 and 42

For doors up to 60 kg, 40 mm thick and 1000 mm wide

Video

Website

CHARACTERISTICS

- Designed for larger swing doors
- Types 41 and 42 differ only in their spring force (recognizable by the plastic cover of the spring pin: Type 41 black, Type 42 white)
- When combining types 41 and 42, type 42 must be always placed on top
- Available either with or without hold-open at approx. 90°
- Stainless steel shoe, fixing plate either zinc-plated or stainless steel (ideal for use in the food industry)

SELECTION CRITERIA

Determining the required swing door hinges depends on the size and weight of the door

Questionnaire

$$K = \frac{G \times 1/2 B}{H}$$

Legend:

- K: factor for choosing the type
- G: weight of the door in kg
- H: height of the door in mm
- B: width of the door in mm

1. Calculate factor K by using this formula.
2. Depending on the calculated factor K, look up in the table which type should be installed on top and which on the bottom.
3. You can use up to 4 swing door hinges per door.
4. If your doors are heavier and/or wider than the ones shown on the table, please contact our technical customer service.
