For heavy doors up to 600 kg

CHARACTERISTICS

- For decades, consistently proven to be highly reliable, especially on heavy entrance doors e.g. churches, museums, public buildings, etc.
- Special axle bearings in the oil chamber allow its use on very heavy doors up to 600 kg
- High load capacity and long operational life
- Closing speed can be continuously adjusted
- A safety valve prevents vital parts of the floor spring from breaking, even when the door is forced shut
- All floor springs come with an embedding box
- Different cover plates, pivot hinges and straps, either for steel or wooden doors available as accessories
- Also available as a mere floor support for heavy doors where the closing function is not needed

The VVAB 180 floor spring is available in five different models. Please indicate the dimensions and the approximate weight of the door and the opening direction according to DIN when ordering.

The following table will help you to choose the correct size for your application. All data refer to a door height of minimum 1.75 m and maximum 2.5 m, without wind load. In case of exterior doors exposed to wind or interior doors in surroundings with high pressure differences, please contact our technical customer service.
